Hello Friends!

It is with great pride that we announce the arrival of the third generation **Kelly Large Agricultural Workstation!** It has all the features of the previous Kelly "Large Ag", plus the **improved broadcast capability and dowsing sensitivity** delivered by an integrated phase array antenna. **360° rate dials** allow exploration of the entire scalar waveform, while improved function labeling and a great new look make this radionic instrument and integrated potentizer the best ever. There is also no better time to try the new Workstation! Not only are we offering special introductory pricing, but also the **first ever instrument trade-in offer**. Send back a Kelly Personal Instrument and we'll award you as much as \$600 credit toward the purchase of a new Workstation. (See the enclosed flier for details.) Truly, **there has never been a better time to make the upgrade** to a Kelly Large Agricultural Workstation!

In our newsletter we strive to share information that will be valuable to radionic researchers, especially news about what other folks are doing. It is for this reason that we are very pleased to present case histories submitted by four farmers working in the Midwest. Their reports illustrate how radionics is being utilized to grow better crops with less expense despite challenging conditions. This issue also includes a thought-provoking letter from the desk of our friend Pennsylvania Pete. Last but not least, we present two new worksheets designed by Cathie Jordan and another edition of her popular column "Herbal Encyclopedia".
